Project Fact-sheet

Name: REVEALing hidden concepts in Social Media

Acronym: REVEAL

Contract no.: FP7-610928

Funding scheme: Collaborative project

Type: Large-scale Integrating Project

Overall budget: ~ 6.9 m €

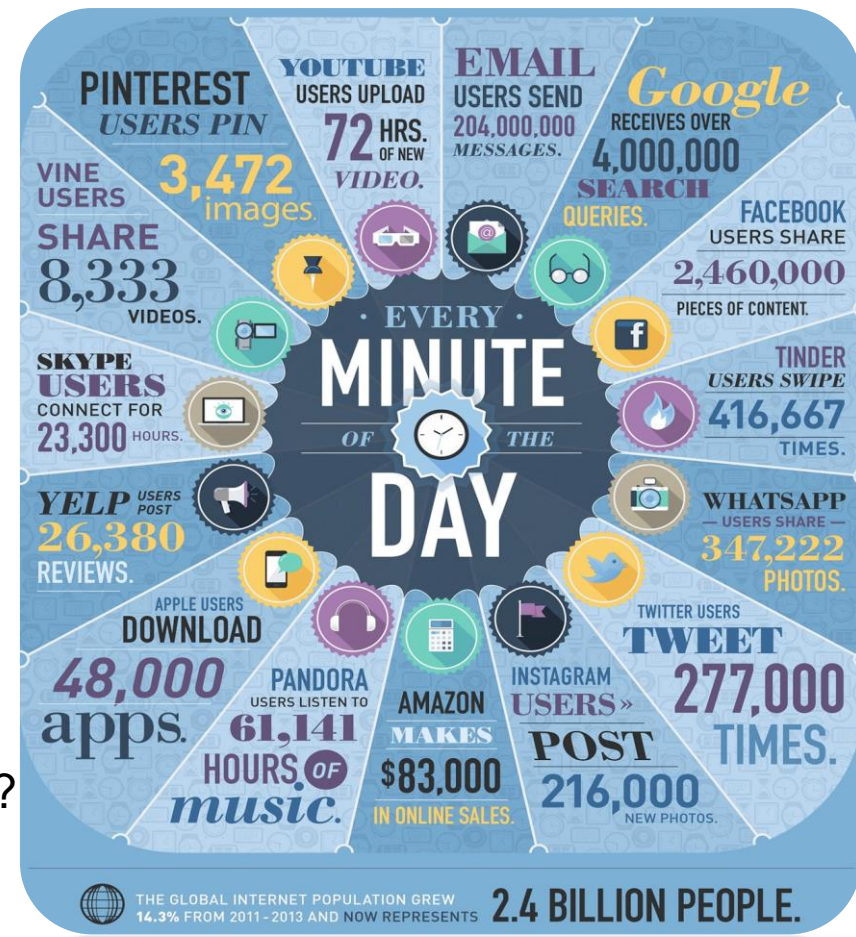

Consortium: 11 different organisations/companies from 7 different countries

Duration: Nov 2013 - Dec 2016 (3+ years)

Problem: too many lies...

- **Huge** masses of information produced by **huge** numbers of sources is made available to **huge** audiences
- Information on **what is happening** is usually somewhere out there
- but even if we manage to discover it one question will still be tricky **is it true?**

- ? Can we tell if a hot lead in social media corresponds to an actual event?
- ? Can we distinguish a hoax from a true story?
- ? Can we filter out propaganda?

How can we teach a machine to distinguish truth from lies?

Solution: too many ways...

Contributor who says?

- **Reputation:** what do people think of this source?
- **History:** what is the past activity of this source?
- **Popularity:** who follows this source?
- **Influence:** what happens because of this source?
- **Presence:** does this source exist?

Content sounds real?

- **Quality:** what is the text style of this post?
- **Popularity:** what is the social interaction with this post?
- **Reputation:** what do we know of linked web content?
- **History:** what is the history of linked web content?
- **Originality:** has the same content been used in the past?

Context sticks together?

- **Cross-check:** are there any similar reports?
- **Diversity:** are the multiple reports sentimentally coherent?
- **Proximity:** do the locations relate to the reports origin?
- **Influence:** does this post trigger discussions?
- **Provenance:** which is the original source of this content?

Andrew S. Crines
@AndrewCrines

Worth remembering Diane James named Putin as one of her political heroes. Nuttall seems to agree. #ukip #bbcsp #ukipleadership

Browse through content characteristics positioned on maps and timelines

And all this, through state-of-the-art research

- **Community-focused Analysis**

detection of communities around users and content themes or tags; discovery of central or influential users, as well as user behaviour and stereotype modelling

- **Media Analysis and Indexing**

multimedia indexing, computational stylometry, similarity analysis and general study of relations between content items, and content credibility evaluation

- **Context-centric Interpretation**

event recognition, location analysis of media, and social context

- **Information Fusion**

merging of all available semantic information, in order to derive a final output that will be simple to explore and interpret

- **Legal Issues**

take into account the public interest and fundamental rights of people, including freedom of expression, cultural and opinion diversity, accuracy and credibility of information, and privacy

What is our market?

▪ **The obvious**

- **News organisations for whom veracity monitoring is every day work**

International Broadcasters, National News Agencies, News Aggregators, fact-checking organisations, Freelance journalists...

...but not so many and not big spenders

▪ **The next in line**

- **Large industry who care about veracity of rumours that spread like wildfire**

Financial & investment firms, PR agencies, PR departments of large enterprises...

...many more with lots of money at stake

▪ **The long tail**

- **The general public interested to know what is going on out there**

Citizens, and many special interest groups as politicians, marketers, public figures...

...who wouldn't want to know the truth?

Our USP against competition

Social Media Verification Made Easy

- **Verify Social Media content aided by state-of-the-art technology**
Systematic semi-automated investigations, deep content analysis and smart visualisations for cross-checking evidence
- **Bundle the power of various verification tools**
Open platform capable to integrate state-of-the-art verification tools
- **Discover experts & communities that can help**
Tracking interactions and mapping networks of people with expertise in specific topics
- **Verify Social Media content collaboratively**
Real-time collaboration maintaining privacy at all levels
