& TECHNOLOGY ALLIANCE

# Introduction

## Atomic XR elements

Volumetric video, spatial audio, multi-sensory. They bring new opportunities and new challenges

## Orchestration mechanisms

Next-generation XR experiences will require orchestration for context-aware adaptiveness

## Web as an open platform

Long-term, interoperable and open platform to provide native atomic XR rendering and orchestration

# Outline

01 Introduction

02 Meaning of  
Orchestration

03 Context-aware adaptive  
XR experiences

04 Conclusions

# Outline

01 Introduction

03 Context-aware adaptive  
XR experiences

02 Meaning of  
Orchestration

04 Conclusions

**single** application | **multiple** screens

**vicomtech**

| K4 Research Alliance

A tool that **connects participants in real-time**, allowing multiple co-located stages and participants to **perform together**.

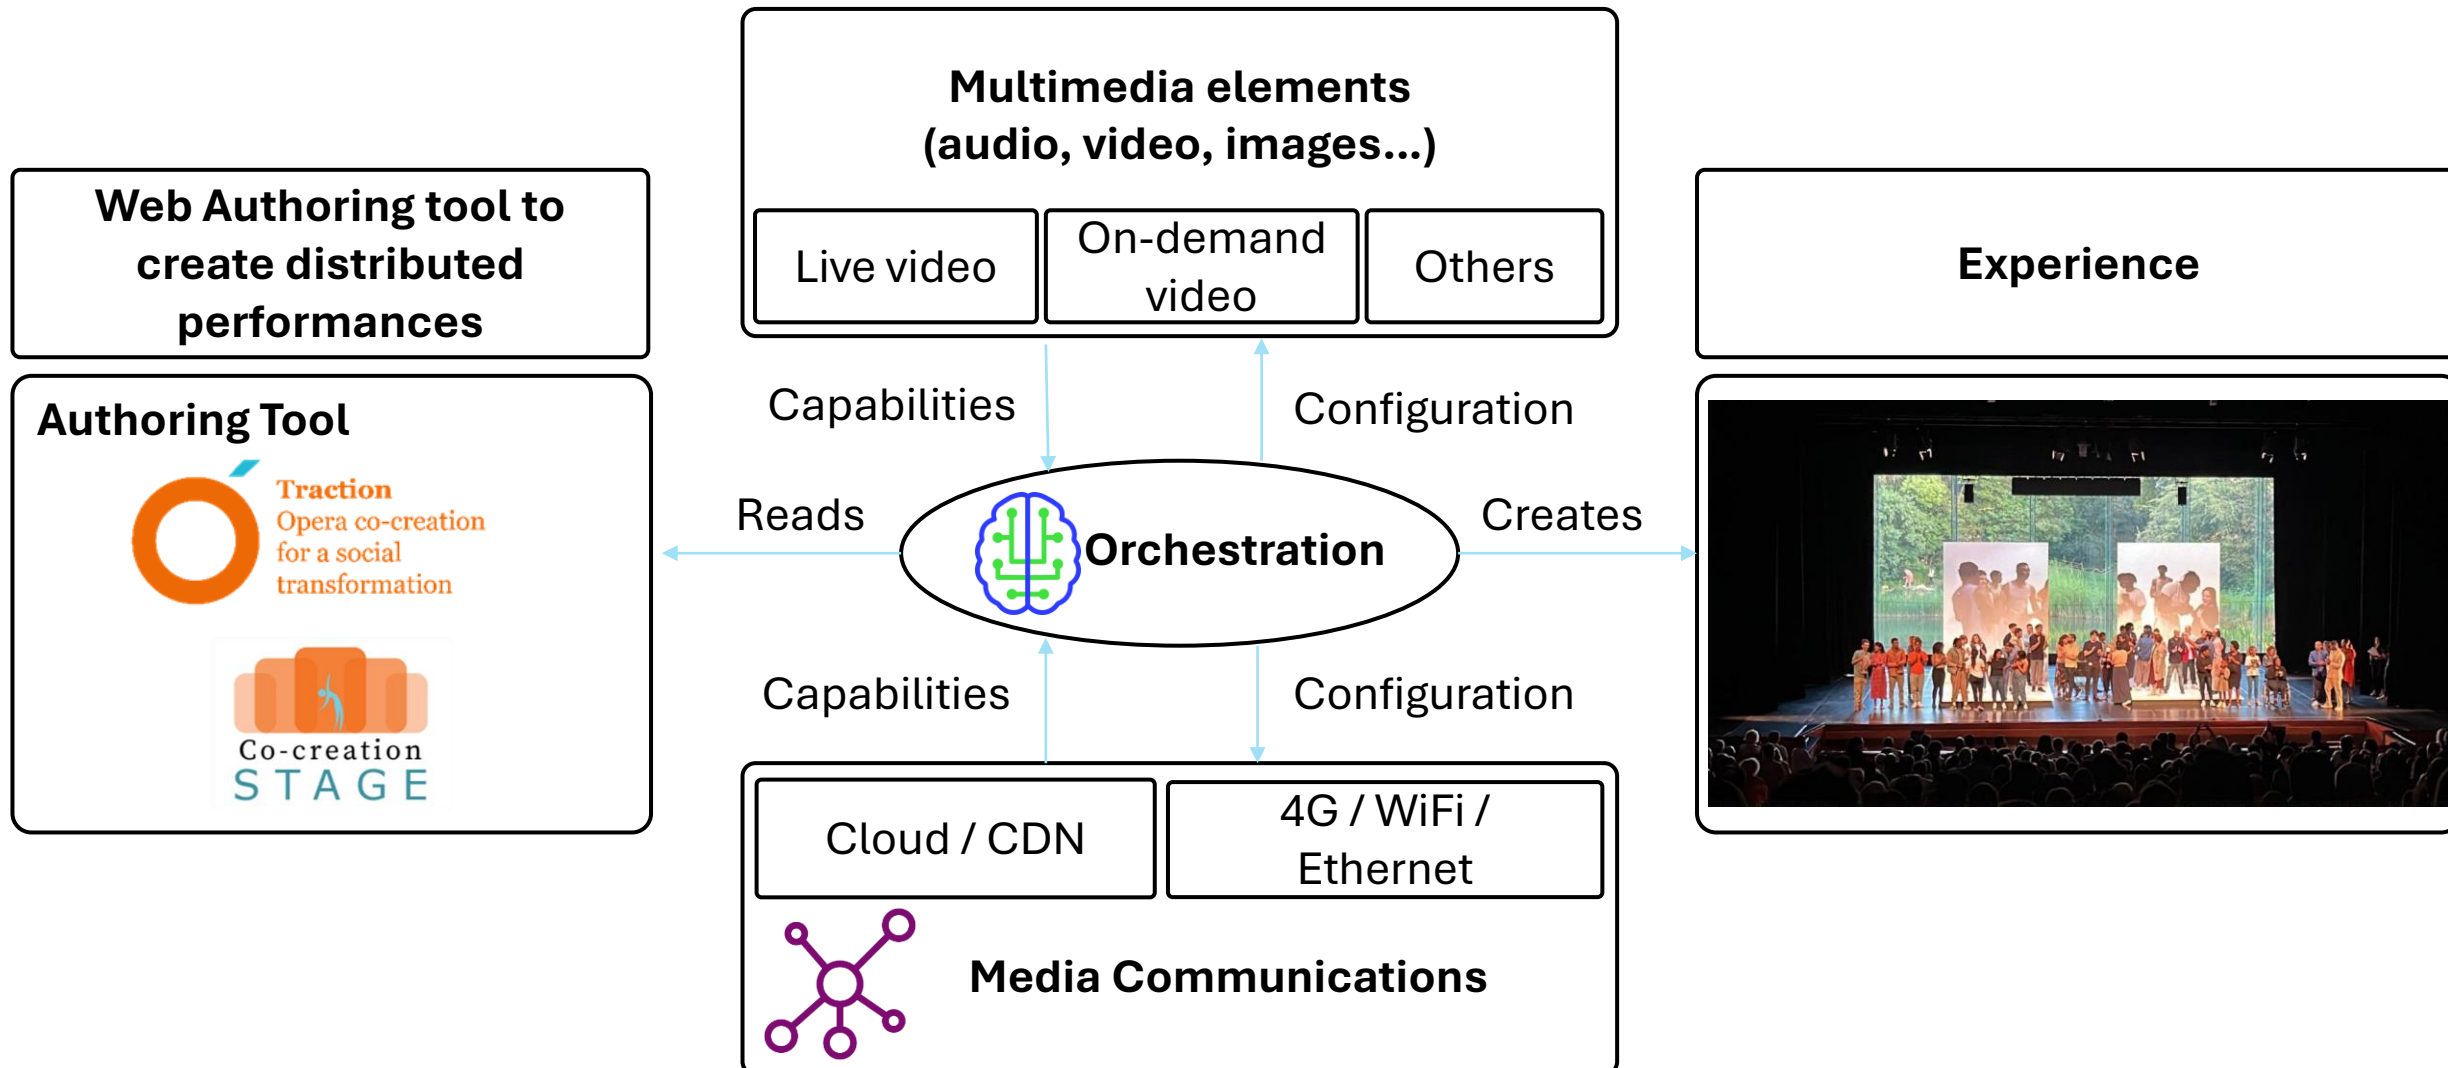

## 40 stories, 40 years

2024 marks 40 years since the launch of the EU's first funding programme dedicated to science, research and innovation. This booklet presents a symbolic 40 stories to illustrate the breadth of R&I made possible through EU R&I funding and some of the results achieved over the last 40 years.

# “Traditional” Media Orchestration

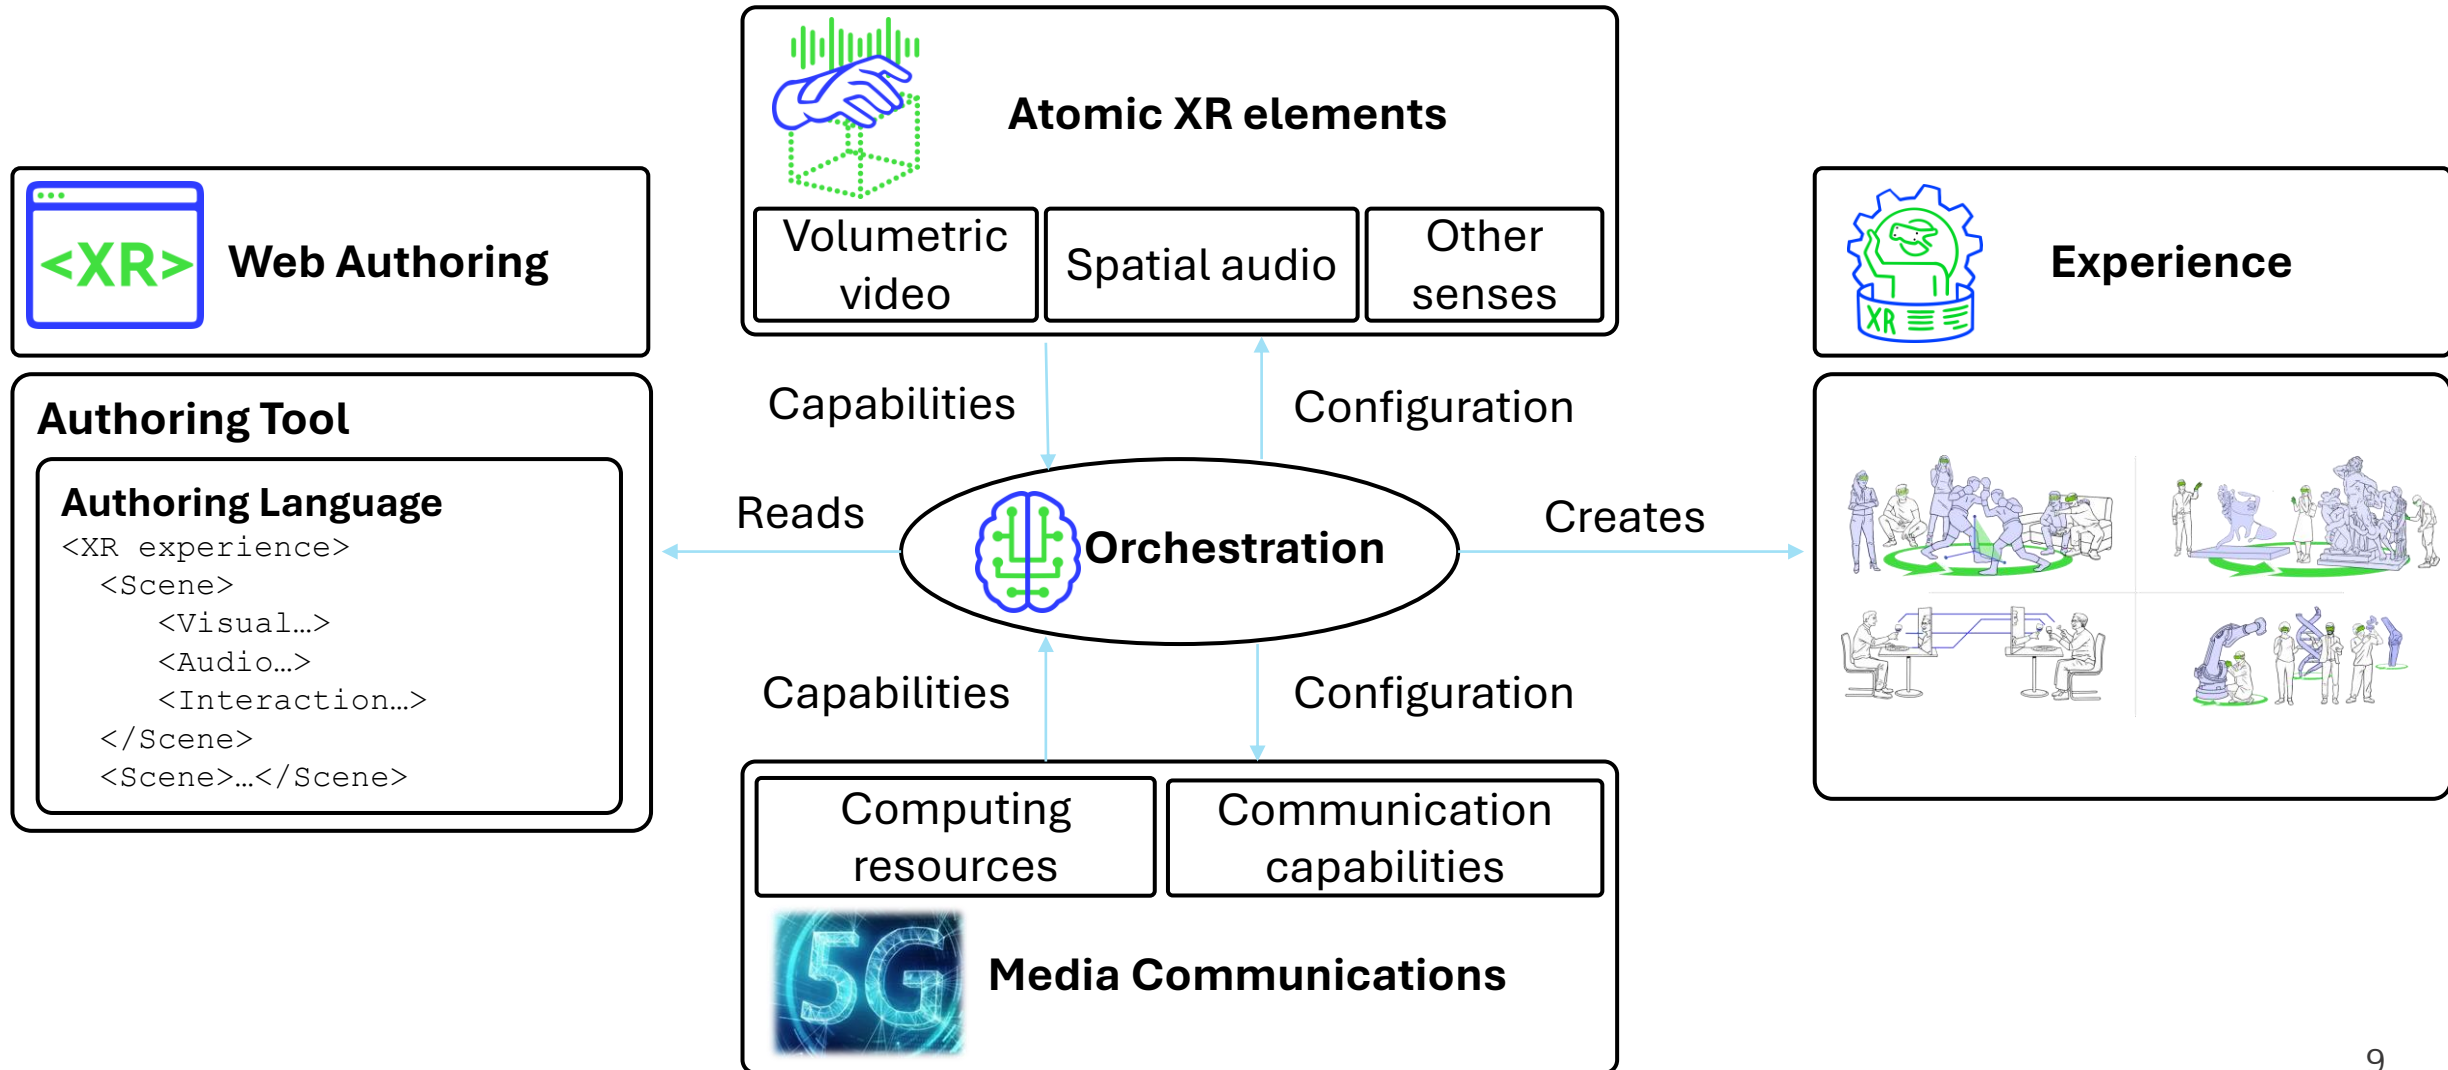

# Next-generation XR Media Experiences

# Orchestration in next-generation XR Media Experiences

# Outline

01 Introduction

02 Meaning of  
Orchestration

03 Context-aware adaptive  
XR experiences

04 Conclusions

# Context-aware adaptiveness

What is the meaning of **RESPONSIVENESS** or **ADAPTATION** in a next-generation XR experience?

Fidelity adaptation of each atomic XR element

Higher quality

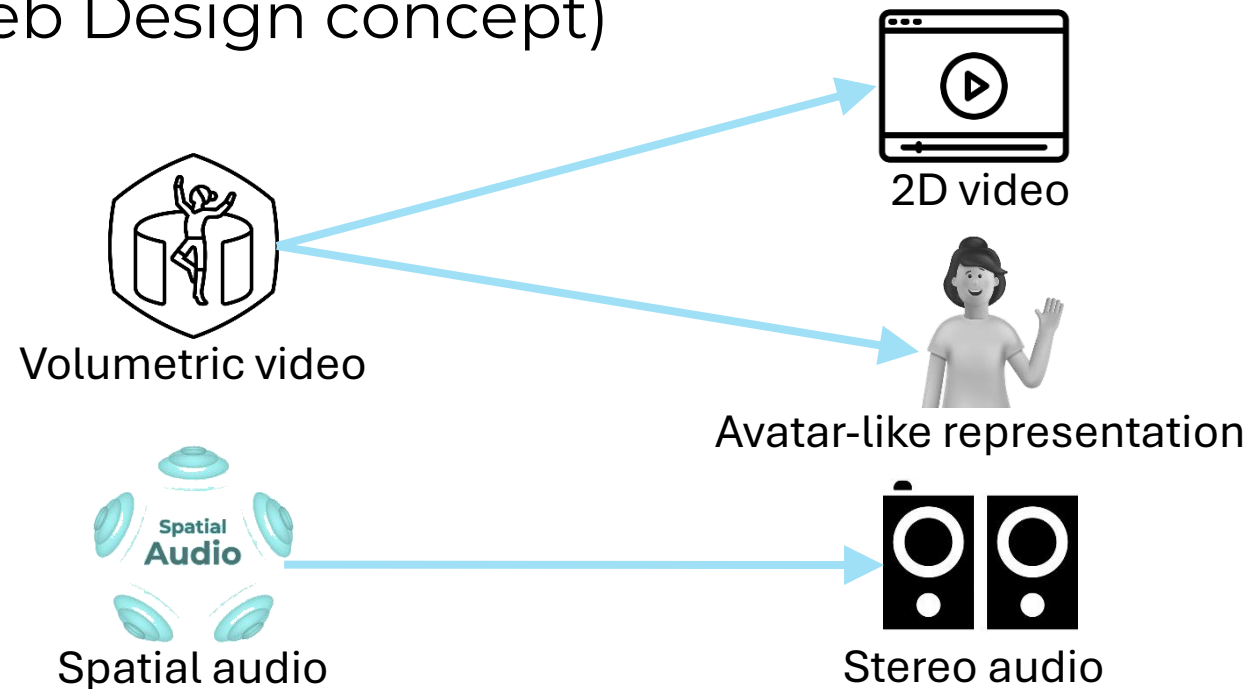

Lower quality

Source: Condense Reality

# Context-aware adaptiveness

What is the meaning of **RESPONSIVENESS** or **ADAPTATION** in a next-generation XR experience?

Jump from one to other representation type (like the RWD - Responsive Web Design concept)

# Context-aware adaptiveness

What is the meaning of **RESPONSIVENESS** or **ADAPTATION** in a next-generation XR experience?

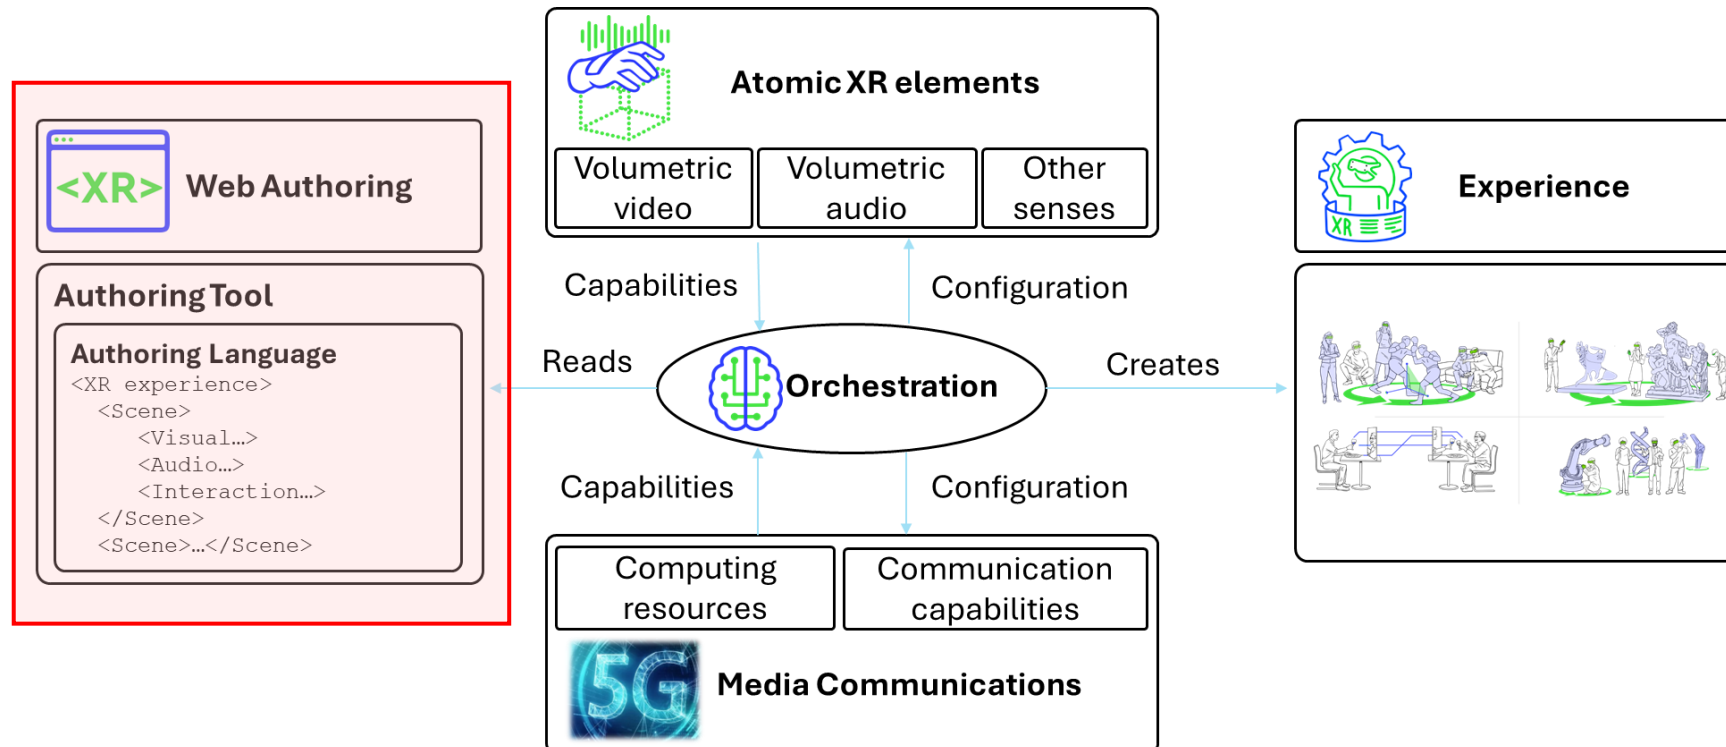

Cross-modality transformation

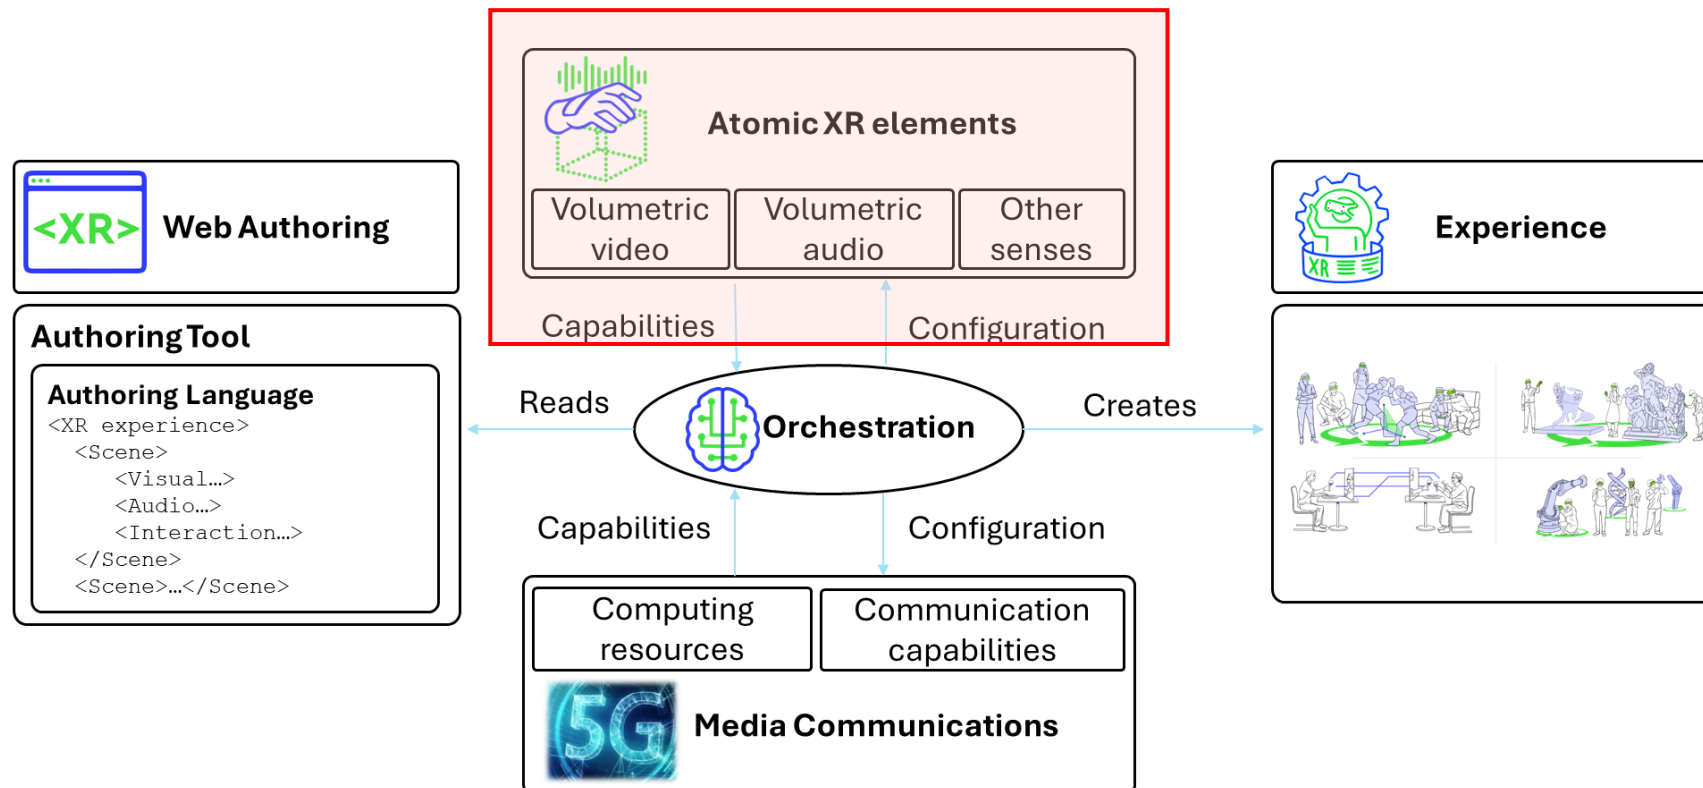

# Context-aware adaptiveness

- **Authoring capabilities** are needed:
  - Orchestration needs to read the behaviour of the application from a high-level description
  - It is not possible to define how to adapt it for each scenario

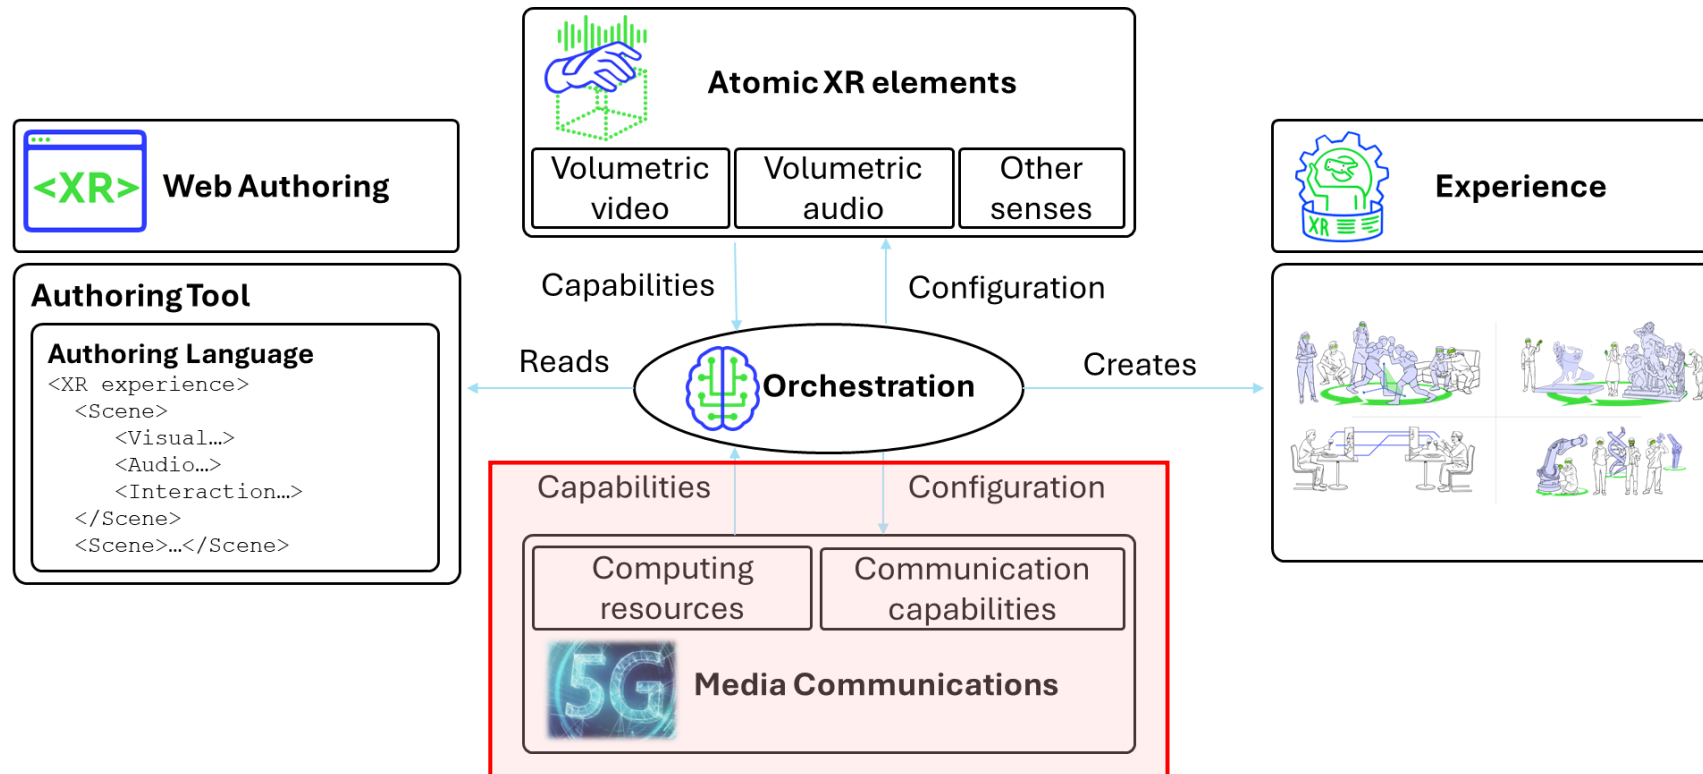

# Context-aware adaptiveness

- **Fidelity-adaptive Atomic XR elements** are needed:
  - From higher to lower fidelity levels
  - From volumetric to 2D or avatar-like
  - Cross-modality transformations

# Context-aware adaptiveness

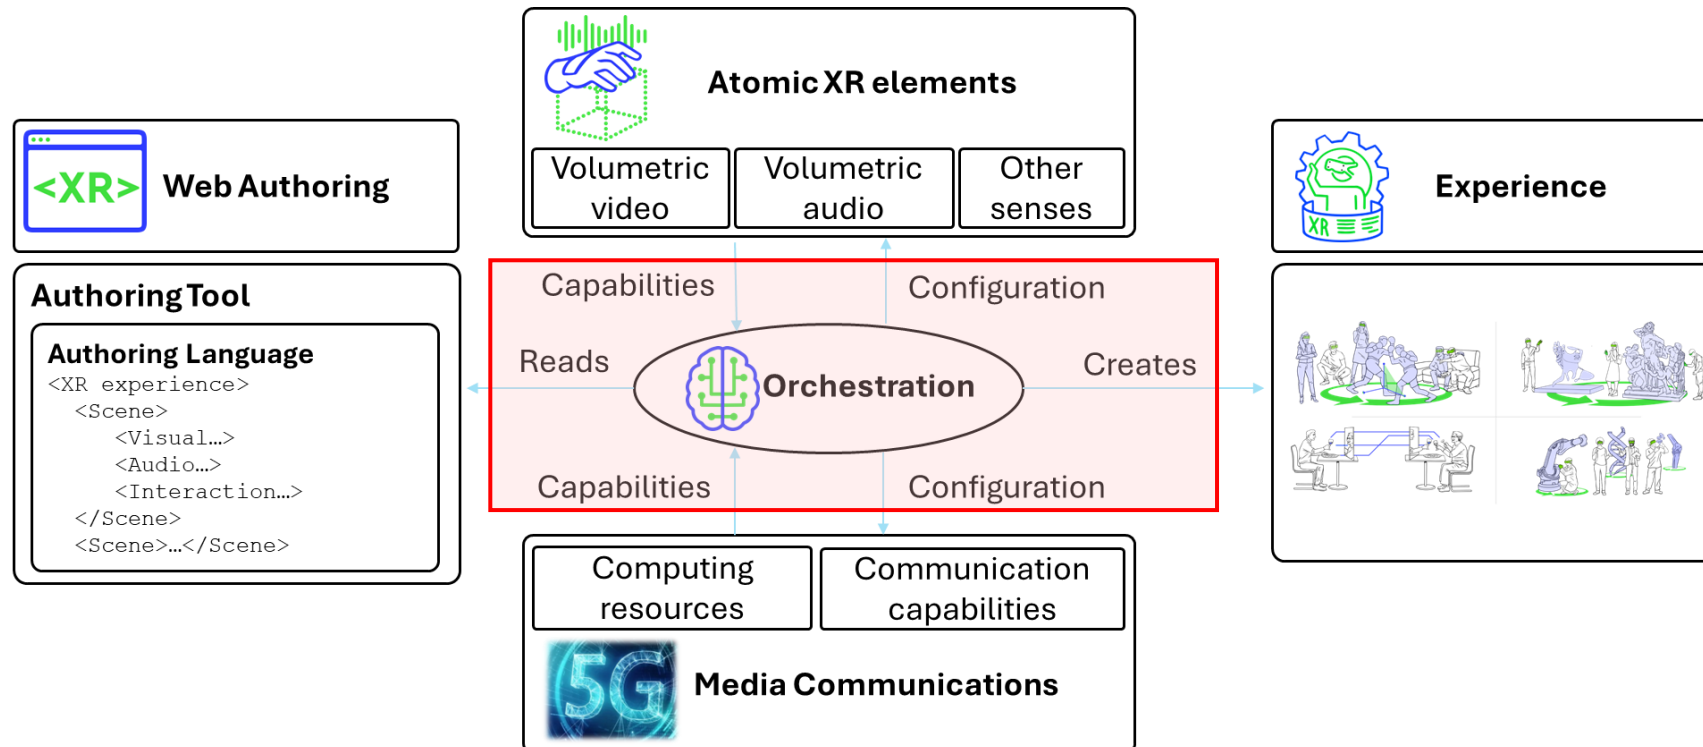

- **Media Communications** need to expose dynamic configuration capabilities:
  - Networks are also their KPIs and performance, and *virtualisation* and *softwarisation* enables to configure them dynamically
  - Edge/Cloud Continuum: Offload computing resources across all the network (end-device, MEC, Cloud)
  - Configure the communication capabilities (intelligent network management, self-organising network, network slicing)

# Context-aware adaptiveness

- Orchestration mechanisms are needed on the Web:
  - The models and algorithms of media orchestration need to be extended towards **new policies, models and algorithms**

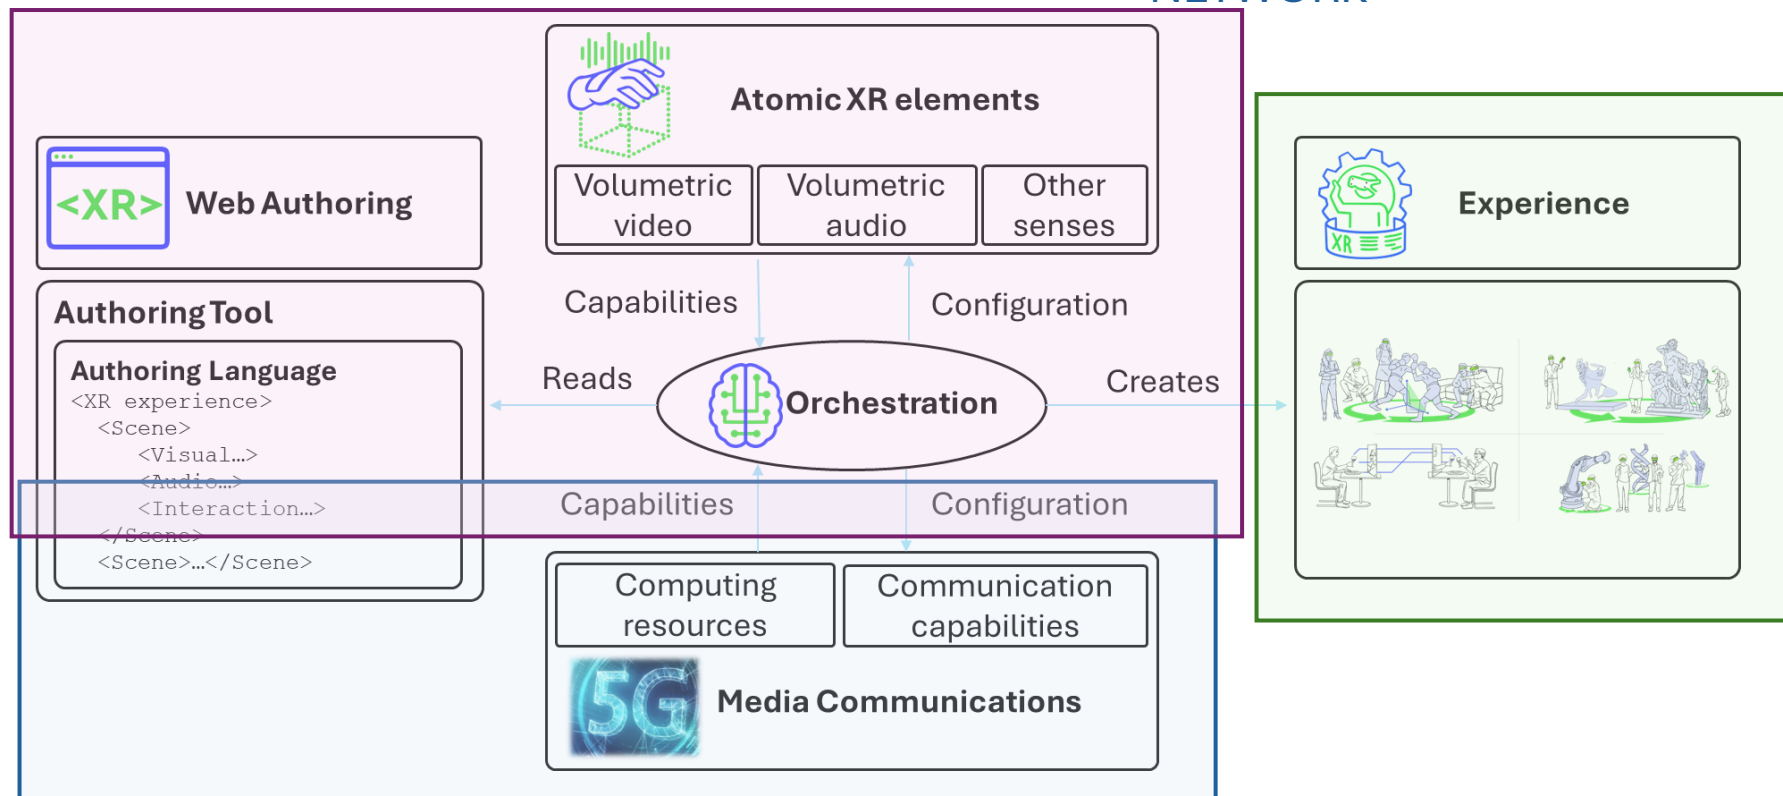

# Context-aware adaptiveness

- New mechanisms to **evaluate the QoE** of next-generation XR experiences on the Web:
  - Current QoE/QoS paradigms from traditional media are useful but insufficient
  - Measuring the experience enables to: a) Understand users' satisfaction, b) activate orchestration mechanisms
  - Measuring the experience involves three different dimensions:

HUMAN / INTERACTION

SERVICE

NETWORK

# Outline

01 Introduction

03 Evaluation of interactive  
XR media experiences

02 Meaning of  
Orchestration

04 Conclusions

# Conclusions

- **Media experiences are evolving** towards more immersive, higher fidelity and multi-sensory
- **Networks** are also improving their KPIs and performance, and *virtualisation* and *softwarisation* enables to configure them dynamically
- **Orchestration** is a key aspect for Next-generation XR Media Experiences
- Need for new mechanisms to **evaluate the QoE** of next-generation XR experiences on the Web
- **The Web** is the long-term, interoperable and open platform to provide native atomic XR rendering and orchestration mechanisms

Addressing this research is crucial to ensure **Next-Generation HI<sup>3</sup> Media Experiences** (*Next-generation Human-centred Immersive, Interactive and Intelligent Media Experiences*), aligned with the strategy for a **Web 4.0 and virtual worlds** reflecting EU values and principles

# Orchestration mechanisms to provide context-aware adaptive XR experiences on the Web

2024/10/23

# Many thanks!
